

How to Use - Webdam services in smart edit

Please find Technical details at Webdam SmartEdit Technical Details

How to Use:

1. Log In to the smart edit portal.
2. Select the required Catalog & its Version.
3. Select the page to be edited & change the mode of the page from "Preview" to "Basic Edit"/"Advanced Edit" mode.

4. Now we can see the 3 icons on any slot/section of the page

5. Click on the pencil icon to edit/update the Image, then the popup looks like this

6. To utilize Webdam account services, just click on the **Webdam** button - it'll automatically connect to the provided webdam account details and fetch the data from the webdam system. The popup looks like below

7. Browse the folders & its subfolders **or** use the search functionality to find the required Image.

8. Functionalities like

S.No	Functionalities	Description
------	-----------------	-------------

1.	Search bar & search button	If we know the image details, please enter the Image code or name or description to get the exact result.
2.	Upload Media button	Initially, this button will be in disable state, Once the user selects the image to be uploaded - Upload Media button will get enabled.
3.	Close X button	This button is used to close the Webdam popup
4.	Checkbox - to pick an image	Only one image at a time is possible to select. When we select an image, upload button will get enable as below screenshot. 
5.	Select your Image Size - Dropdown	This dropdown is used to select the desired size/resolution of the Image. 
6.	Pagination	This pagination icons are used to show the next/previous paged results. Previous Icon (<) : Will be disabled in first page, as there won't be any previous page results. It will be enable when previous page results exists. next Icon (>) : On click of this button, shows up next paged results. It'll be disabled when there are no results exists. 
7.	Validation	Search bar - empty validation If user didn't select the size of the Image - Error will be shown as below. 

- After selecting the size of the Image, click on the **upload media** button - the next view looks like this

If we want to update **code/name/Alt Text** - we can change accordingly.

- After checking the details, click on the upload button. the Image tile will get updated and looks like this

- Finally, click on the **Save** button, the image will be updated. 😊

Catalog Version :

Staged: If we're modifying data on the staged version, we need to perform synchronization to see changes on the website.

Online: If we're directly modifying the content in the Online version (not recommended) - we can see the change immediately.

New Image Component in Smart edit:

To create a new image component with Webdam Asset directly in smart edit, the process is the same as explained above but the place is different.

As shown in the screenshot, click on **+Component** & pick any Image Component - let's drag and drop **SimpleBannerComponent** to any desired slot and it'll pop up like below

After clicking on the Webdam button, it'll connect to the Webdam account and follow the above-described procedure.

Thank you 😊
